# MISIÓN

## MISIÓN

Ser un órgano técnico ejecutor eficiente y moderno, parte integrante del Sistema Integrado de Estadística Agraria (SIEA), responsable de diseñar, producir, analizar y difundir información estadística agraria actualizada y confiable en la Región Lima, en concordancia con las políticas del MIDAGRI. Promover el uso estratégico de la información para fortalecer la toma de decisiones de los agentes económicos, productores agrarios y autoridades regionales, contribuyendo al desarrollo sostenible, competitivo y equitativo del sector agrario.

# VISIÓN

## VISIÓN

Ser la principal fuente regional de información estadística agropecuaria, tecnológicamente avanzada y altamente accesible, integrada al Sistema Integrado de Estadística Agraria, que impulse la transformación digital del sector agrario en la Región Lima, convirtiéndose en un referente nacional en gestión de datos para el desarrollo rural inclusivo y sustentable.

## I. CARACTERÍSTICAS DEL SECTOR

Las principales características del sector son las siguientes:

### A. Ubicación geográfica de la Región

El ámbito del Gobierno Regional de Lima se encuentra situado en la zona centro occidental del territorio peruano, abarcando zonas del litoral e interandinas con altitudes que oscilan entre 0 y 6,127 m.s.n.m. Tiene una superficie de 32,126.46 Km<sup>2</sup>, que representa el 2.5% del territorio nacional.

Comprende las regiones naturales de Costa, Sierra y presenta una gran diversidad de pisos ecológicos correspondientes a la vertiente occidental del Pacífico con diferentes altitudes, desde la Costa o Chala (0 a 500 m.s.n.m.) hasta la Janca o Cordillera (sobre los 4,800 m.s.n.m.) existiendo un predominio de las regiones Yunga (500 a 2,300 m.s.n.m.) y Quechua (2,300 a 3,500 m.s.n.m.).

### B. Demarcación política de la Región

Políticamente el departamento está constituido por 9 provincias, 128 distritos y 378 sectores estadísticos. Estas provincias son las siguientes: Barranca, Cajatambo, Canta, Cañete, Huaral, Huarochirí, Huaura, Oyón y Yauyos. Su sede ha sido establecida en concordancia con la Ley de Bases de Descentralización, en la capital de la provincia de Huaura, siendo Huacho capital de la provincia de Huaura.

La Región Lima se rige por la Constitución Política del Estado, la Ley de Bases de Descentralización, Ley No. 27783 y la Ley Orgánica de Gobiernos Regionales, Ley No. 27867 y sus Modificatorias, Ley No. 27902.

Fuente INEI

### C. Clima de la Región

Clima variado de acuerdo a su altitud, frío en las zonas altas, agradable y templado en los valles interandinos. En la costa el clima es húmedo.

### D. Aspectos Fisiográficos

La costa se caracteriza por una continuidad desértica intercalada con pequeños valles muy cercanos unos a otros. Está conformada por pampas áridas y elevaciones de poca altura cercanas a los 1,000 metros denominadas "lomas" donde se desarrollan especiales condiciones naturales y ambientales que dan lugar al crecimiento temporal de abundante vegetación, y la presencia de valles de curso irregular que rompen la continuidad desértica dando lugar a la formación de fértiles zonas agrícolas y ganaderas.

### E. Recursos Hídricos: Ríos, Lagunas, otros.

El territorio de la Región es recorrido por 12 ríos principales que discurren en dirección Este a Oeste y que

vierten sus aguas al Océano Pacífico, conformando una vertiente de forma alargada de longitudes comprendidas entre 62 a 200 Km. Los principales ríos que dan origen a los valles del mismo nombre son: Fortaleza, Pativilca, Huaura, Chancay, Huaral, Chillón, Rímac, Lurín, Mala y Cañete. Estos se caracterizan por tener un régimen de escurrimiento irregular y carácter torrencioso, concentrándose las descargas durante 3 o 4 meses del año de diciembre a SEPTIEMBRE principalmente, período denominado de avenidas, durante el cual se estima discurre entre el 60 y 70% de la descarga total anual, teniendo durante el resto del año una baja considerable. Sin embargo, la disponibilidad de agua de estos ríos, asciende a un volumen medio anual de 6,408 millones de m<sup>3</sup>. El carácter eminentemente andino de la Región Lima, su posición central en el Perú, el factor hidráulico de sus ríos a distancias promedio de 100 Km. favoreciendo la cercanía de sus valles o centros agrícolas, son factores importantes para afianzar las actividades agrícolas y pecuarias de la Región.

En la región se tiene la presencia de 12 cuencas:

1. Cuenca del Río Fortaleza
2. Cuenca del Río Pativilca
3. Cuenca del Río Supe
4. Cuenca del Río Huaura
5. Cuenca del Río Chancay Huaral
6. Cuenca del Río Chillón (parte media y alta)
7. Cuenca del Río Rímac (parte media y alta)
8. Cuenca del Río Lurín (parte media y alta)
9. Cuenca del Río Chilca
10. Cuenca del Río Mala
11. Cuenca del Río Omas
12. Cuenca del Río Cañete

Además, existen aproximadamente 667 lagunas. De las cuales 47 de ellas son controladas, distribuidas de la siguiente manera: 01 en Barranca, 10 en Huaura, 12 en Chancay Huaral, 03 en el Chillón y 21 en el Rímac; la capacidad de almacenamiento es de 454'911,000 m<sup>3</sup>.

Es importante anotar que, dada su configuración, el ámbito del Gobierno Regional de Lima es muy vulnerable a los efectos del Fenómeno del Niño que se manifiesta por el aumento de la temperatura del mar y el receso de los vientos alisios, que origina fuertes lluvias, inundaciones y huaycos en las zonas alto andinas, por otra parte, maretazos en las áreas costeras.

Las zonas generalmente afectadas por las lluvias están localizadas en las alturas de Matucana, Huarochirí, Oyón, Lunahuaná, etc. En general todas las cuencas hidrográficas de Lima aumentan su caudal.

#### F. Capacidad de Uso de Suelos

En el ámbito del Gobierno Regional de Lima, existe una superficie agrícola de 180,922.60 hectáreas de las cuales el 94% se encuentra bajo riego y solamente el 6% es de superficie seco. Las tierras bajo riego en la zona de la sierra representan el 81.9% de la superficie agrícola, donde se desarrolla una agricultura diversificada con cultivos principalmente de pan llevar, y las tierras de seco el 18.1%. Sin embargo, la gran parte de la producción agrícola se orienta al autoconsumo.

A continuación, se presenta un cuadro con la distribución de la superficie agrícola y no agrícola por provincia

*Distribución de la Superficie Agrícola y No Agrícola por Provincia*

### G. Principales productos de la actividad agrícola

Entre los principales cultivos destacan el camote, el maíz chala, el maíz amarillo duro y la papa que participan en más de un 75% de la producción nacional. Asimismo, destacan cultivos como la caña de azúcar, la fresa y frutilla, el pallar grano verde, el manzano, el durazno, el frijol vainita, la mandarina, la alfalfa, el naranjo y las hortalizas que presentan un significativo volumen de producción a nivel regional. La Dirección Regional de Agricultura Lima a través de la Oficina de Información Agraria agrupa los productos de la siguiente manera:

Productos de Consumo Humano, comprende a los siguientes: Cebada G., Maíz, Trigo, Papaya, Plátano, Ajos, Cebolla, Tomate, Zapallo, Arveja G.S., Arveja G.V., Haba G.V., Haba G.S., Frijol G.S., Camote, Olluco, Papa, Frijol G. V., Yuca, Mandarina, Mango, Manzano, Naranjo, Palto, Vid, Oca, Maíz Choclo, Hortalizas/otros, Fresa, Limón, Membrillo, Pecano, Peral, Tangelo, Olivo, Granado, Níspero, Chirimoyo, Pallar G. S.

- Productos de Consumo Industrial, son los destinados a la industria entre ellos comprenden: Algodón, Caña de Azúcar, Maíz A. Duro.
- Productos de Agro-Exportación: entre ellos se cuenta con el Ají, Alcachofa, Espárrago, Chirimoya, Frijol Castilla, Higuera, Lúcumá, Maíz Morado, Maracuyá, Melocotón, Tuna, Ciruelo, Granadilla, Orégano, Frijol Vainita, Maca, Mashua, Avena grano.
- Pastos de Cultivo: Son los productos destinados al forraje y alimentación de las especies pecuarias. Entre ellos se consideran: Alfalfa, Avena Forrajera, Dactylis sp., Maíz Chala.

Fuente: DRA Lima

**Las siembras del mes de noviembre de la presente campaña 2025/2026 de los principales cultivos transitorios de Lima disminuyeron en 29.2% (-1,060 ha) en comparación a similar mes de la campaña 2023/2024, principalmente en los cultivos de camote -50.6% (-247 ha), maíz amarillo duro -28.7% (-247 ha), paprika -89.3% (-195 ha) y ají -50.6% (-91 ha).**

### CAMOTE

Las siembras del mes de camote fueron menores en 50.6% (-247 ha) principalmente en las provincias de Cañete -49.1% (-124 ha), Barranca -86% (-95 ha), Huaral -22.4% (-24 ha).

### MAÍZ AMARILLO DURO

Las siembras mensuales de maíz amarillo duro disminuyeron en 28.7% (-247 ha) principalmente en las provincias de Huaura -61.9% (-179 ha), Cañete -28.4% (-39 ha), Barranca -10.5% (-17 ha).

## PAPRIKA

Las siembras del mes de paprika decrecieron en 89.3% (-195 ha) principalmente en las provincias de Barranca -95.7% (-163 ha), Huaura -66.7% (-32 ha).

## AJÍ

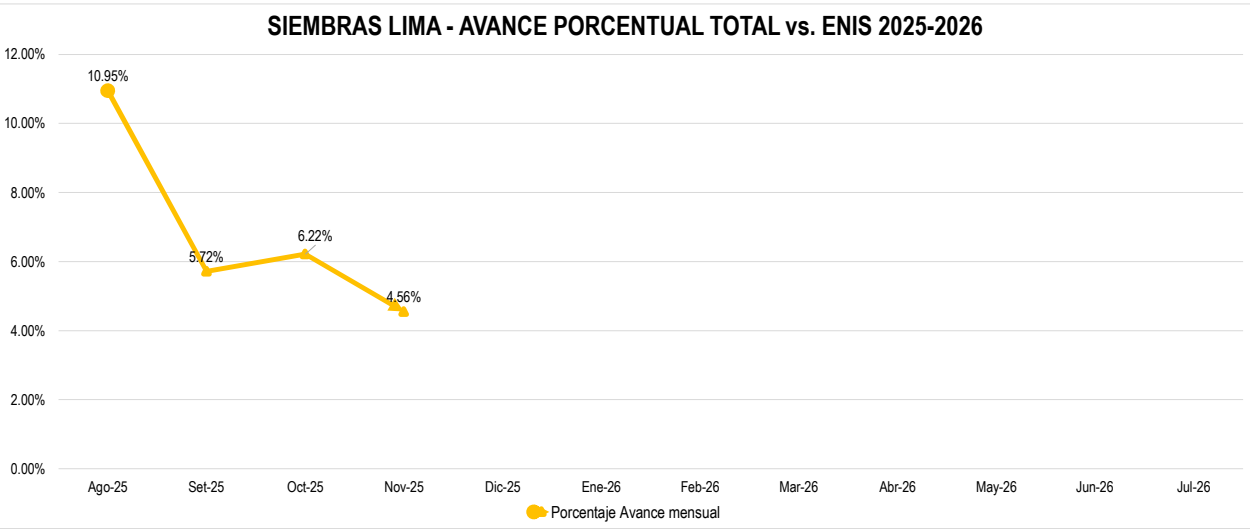

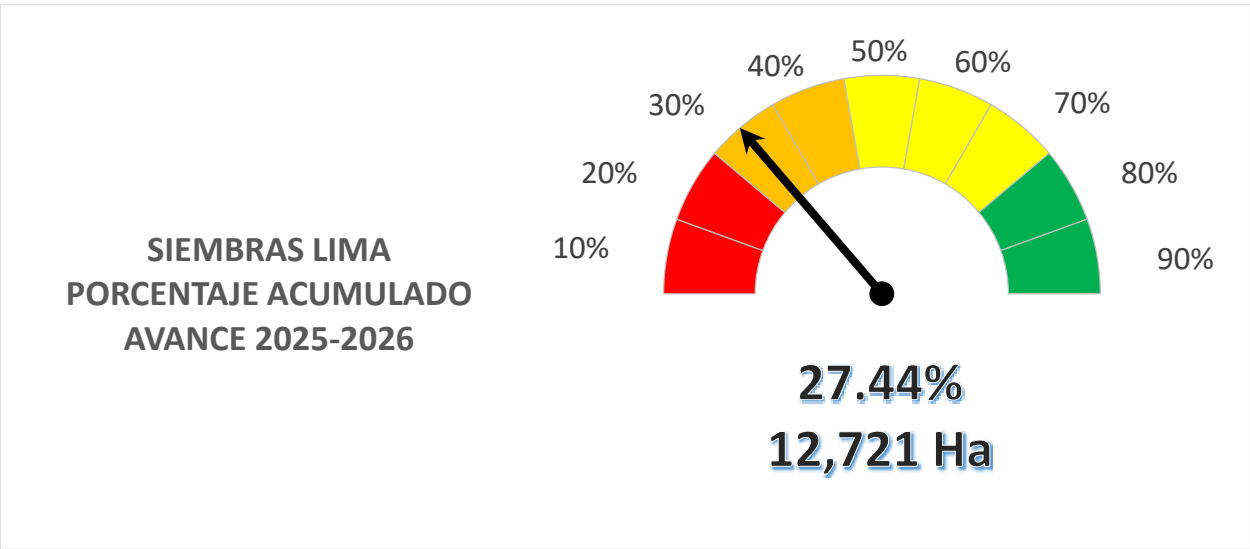

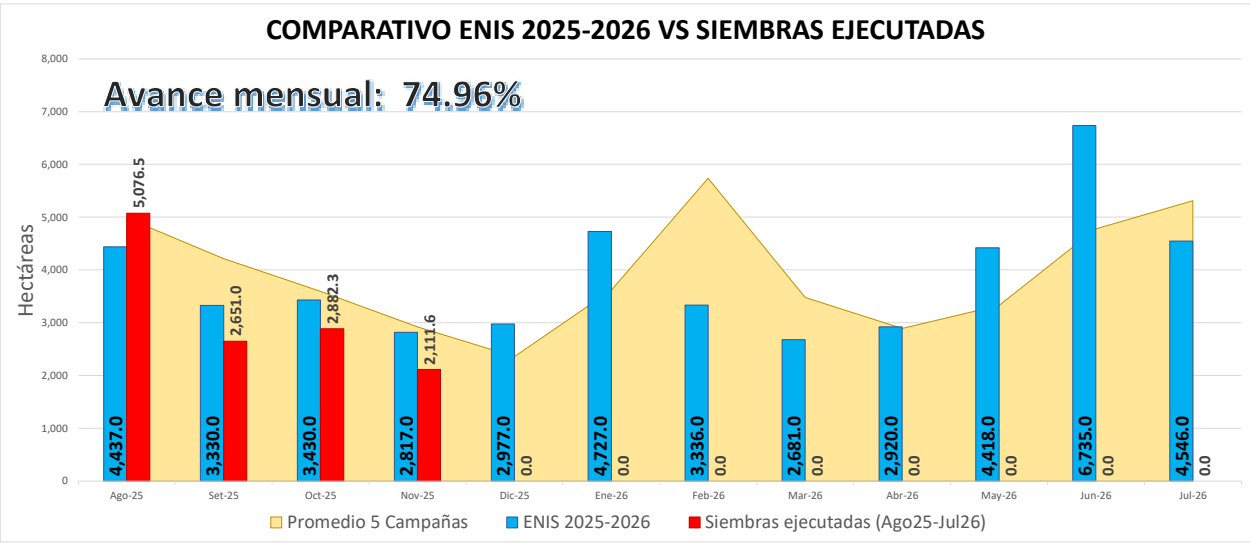

Las siembras de ají fueron inferiores en 50.6% (-91 ha) principalmente en las provincias de Barranca -97.9% (-95 ha), Cañete -60% (-6 ha), Huarochirí -60% (-3 ha).

**ATENCIÓN:** Los cultivos que incrementaron sus siembras en el mes con relación al mismo mes de la campaña 2024/2025 en gran extensión fueron: maíz chala en Supe (+76 ha), maíz amarillo duro en Pativilca (+70 ha) y zanahoria en Aucallama (+56 ha). Por otra parte, los cultivos que disminuyeron sus siembras en el mes, en comparación a similar mes de la campaña 2024/2025, en gran extensión fueron: algodón en Quilmana (-181 ha), maíz amarillo duro en Vegueta (-130 ha) y paprika en Supe (-117.7 ha).

## II.B. SIEMBRAS EJECUTADAS vs ENIS 2025-2026

AGOSTO 2025 – NOVIEMBRE 2025

## II.C. ANÁLISIS DE LA PRODUCCIÓN AGRÍCOLA

### ENERO 2025-NOVIEMBRE 2025

# **INFORME CUALITATIVO DE LA PRODUCCIÓN AGRÍCOLA ACUMULADA**

**(ENERO-NOVIEMBRE 2024 - ENERO-NOVIEMBRE 2025)**

**LA PRODUCCIÓN AGRÍCOLA AL MES DE NOVIEMBRE DEL 2025 SE INCREMENTÓ EN 2.7% PRINCIPALMENTE EN LOS CULTIVOS DE ARÁNDANO, FRESA Y ESPÁRRAGO.**

## **ARÁNDANO**

La producción acumulada de arándano se incrementó en 213.1% en comparación a similar período del año anterior, principalmente en los distritos de: Supe que se incrementó en 564% (4,506 t), en Barranca que se incrementó en 511% (3,015 t), en Sayán que se incrementó en 65.5% (556.9 t) y en Quilmana que se incrementó en 109.2% (497 t).

Sin embargo la producción disminuyó en Huaura que disminuyó en -61.1% (-77.2 t), en San Vicente De Cañete que disminuyó en -17.6% (-37 t) y en Huacho que disminuyó en -21.1% (-6.3 t).

## **FRESA**

La producción acumulada de fresa se incrementó en 81.1% en comparación a similar período del año anterior, principalmente en los distritos de: Barranca que se incrementó en 390.9% (1,0913 t), en Supe que se incrementó en 830% (2,656 t), en San Vicente De Cañete que se incrementó en 194.8% (1,694.5 t) y en Vegueta que se incrementó en 63.5% (1,522.3 t).

Sin embargo la producción disminuyó en Huacho que disminuyó en -74.1% (-309.1 t), en Santa María que disminuyó en -49.8% (-194 t) y en Caleta De Carquin que disminuyó en -32.1% (-116 t).

## **ESPÁRRAGO**

La producción acumulada de espárrago se incrementó en 44.7% en comparación a similar período del año anterior, principalmente en los distritos de: Supe que se incrementó en 162.1% (1,754 t), en Imperial que se incrementó en 98.4% (1,486 t), en Paramonga que se incrementó en 163.8% (1,089 t) y en San Vicente De Cañete que se incrementó en 33.5% (609 t).

Sin embargo la producción disminuyó en San Luis que disminuyó en -48.8% (-620 t), en Vegueta que disminuyó en -35.9% (-546 t) y en Quilmaná que disminuyó en -80.7% (-77.5 t).

De otro lado, los cultivos que incrementaron su producción acumulada fueron:

### **MAÍZ AMARILLO DURO**

La producción acumulada de maíz amarillo duro disminuyó en -46.5% en comparación a similar período del año anterior, principalmente en los distritos de: Barranca que disminuyó en -80.3% (-28,688 t), en Pativilca que disminuyó en -64% (-14,766 t), en Supe que disminuyó en -64.2% (-11,891 t) y en San Vicente De Cañete que disminuyó en -49.8% (-3,960.3 t).

Sin embargo la producción se incrementó en Vegueta que se incrementó en 41.3% (3,359 t), en Nuevo Imperial que se incrementó en 24.2% (519.3 t) y en Aucallama que se incrementó en 11.4% (325.9 t).

### **PALTA**

La producción acumulada de palta disminuyó en -26.4% en comparación a similar período del año anterior, principalmente en los distritos de: Barranca que disminuyó en -61.6% (-13,100 t), en Quilmana que disminuyó en -80.6% (-7,403 t), en Huaral que disminuyó en -34.8% (-5,258.1 t) y en San Vicente De Cañete que disminuyó en -93.4% (-3,393 t).

Sin embargo la producción se incrementó en Paramonga que se incrementó en 111.5% (2,032.5 t), en Huacho que se incrementó en 62.2% (1,691.8 t) y en Supe que se incrementó en 44.3% (1,473 t).

### **PÁPRIKA**

La producción acumulada de páprika disminuyó en -16.5% en comparación a similar período del año anterior, principalmente en los distritos de: Barranca que disminuyó en -39.1% (-1,922 t), en Pativilca que disminuyó en -40.3% (-981.5 t), en Huacho que disminuyó en -64.1% (-718.4 t) y en Vegueta que disminuyó en -48.6% (-430.9 t).

Sin embargo la producción se incrementó en Supe que se incrementó en 35.9% (1,917 t).

## **INFORME CUALITATIVO DE LA PRODUCCIÓN AGRÍCOLA MENSUAL (NOVIEMBRE 2024 - NOVIEMBRE 2025)**

La producción agrícola del mes de noviembre se incrementó en 13.8% principalmente en los productos de arándano, papa y manzana.

### **ARÁNDANO**

La producción mensual de arándano se incrementó en 160.1% en comparación al mismo mes del año anterior, principalmente en los distritos de: Barranca que se incrementó en 483.3% (725 t), en Supe que se incrementó en 204.9% (672 t), en Quilmana que se incrementó en 60.6% (114 t) y en Nuevo Imperial que se incrementó en 84.2% (101 t).

### **PAPA**

La producción mensual de papa se incrementó en 29.8% en comparación al mismo mes del año anterior, principalmente en los distritos de: San Vicente De Cañete que se incrementó en 316.9% (4,120 t), en Imperial que se incrementó en 336% (3,737.5 t), en Nuevo Imperial que se incrementó en 226.3% (2,878 t) y en Quilmana que se incrementó en 122.3% (1,865 t).

Sin embargo, la producción del mes disminuyó especialmente en los distritos de: Barranca que disminuyó en -17.5% (-2,120 t), en Aucallama que disminuyó en -41% (-1,652.6 t) y en Chancay que disminuyó en -42.1% (-1,285.1 t).

### **MANZANA**

La producción mensual de manzana disminuyó especialmente en los distritos de: Quinocay que disminuyó en -100% (-247.6 t), en Aucallama que disminuyó en -100% (-194 t) y en Santa Cruz De Flores que disminuyó en -44.2% (-187.2 t).

**De otro lado los productos que registraron menor producción en el mes fueron:**

### **PÁPRIKA**

La producción mensual de páprika disminuyó en -87.8% en comparación al mismo mes del año anterior, principalmente en los distritos de: Supe que disminuyó en -100% (-515 t), en Vegueta que disminuyó en -85.3% (-312 t), en Santa María que disminuyó en -100% (-55.9 t).

Sin embargo, la producción del mes se incrementó especialmente en los distritos de: Barranca que se incrementó en 85.7% (30 t).

### **MANDARINA**

La producción mensual de mandarina disminuyó en -26.5% en comparación al mismo mes del año anterior, principalmente en los distritos de: Sayán que disminuyó en -84.4% (-5,146.2 t), en Aucallama que disminuyó en -100% (-1,468.8 t), en Nuevo Imperial que disminuyó en -100% (-236 t) y en Santa María que disminuyó en -100% (-73.6 t).

Sin embargo, la producción del mes se incrementó especialmente en los distritos de: Huaral que se incrementó en 20.9% (1,861 t).

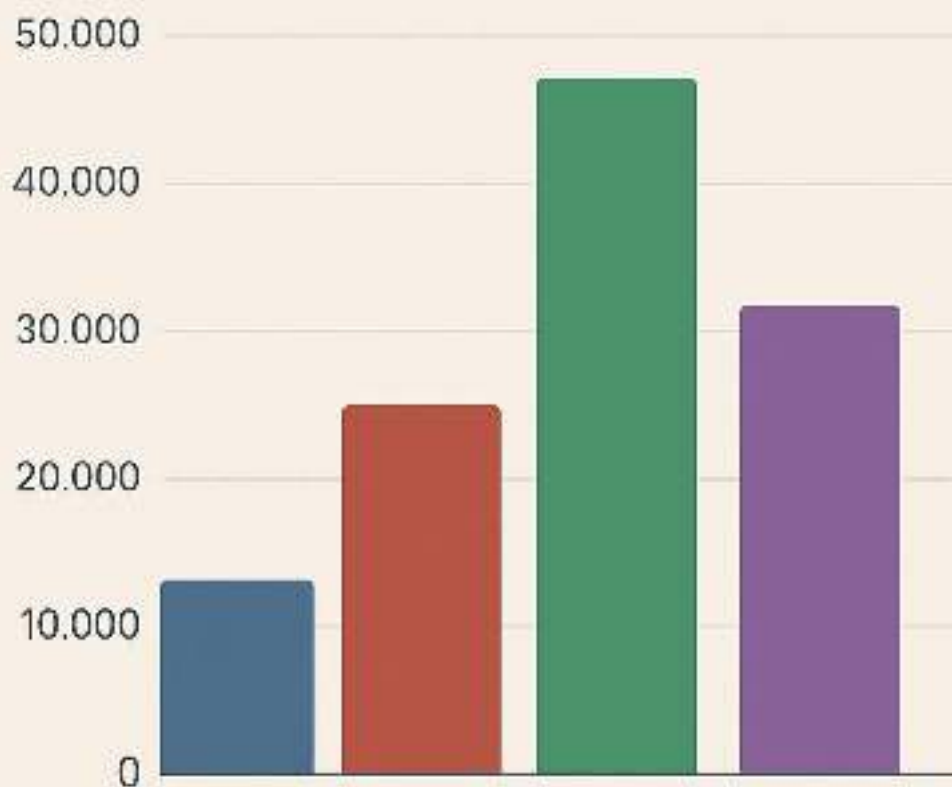

### **CAÑA DE AZÚCAR**

La producción mensual de caña de azúcar disminuyó en -22% en comparación al mismo mes del año anterior, principalmente en los distritos de: Paramonga que disminuyó en -50.2% (-12,100 t), en Huaura que disminuyó en -33.3% (-8,850 t), en Pativilca que disminuyó en -33.3% (-6,000 t) y en Supe que disminuyó en -27.9% (-4,650 t).

Sin embargo, la producción del mes se incrementó especialmente en los distritos de: Sayán que se incrementó en 12.9% (5,803.5 t).

## IV.F. ALERTAS METEOROLÓGICAS EMITIDAS

La Dirección de Estadística e Información Agraria de la DRALima informa que entre el jueves 13 y el sábado 15 de noviembre de 2025 se registrará un incremento de la temperatura diurna en la sierra limeña, de moderada a fuerte intensidad. Se prevé escasa nubosidad hacia el mediodía, lo que favorecerá un aumento significativo de la radiación ultravioleta. Además, se esperan precipitaciones localizadas y ráfagas de viento con velocidades cercanas a los 40 km/h, principalmente durante las horas de la tarde. El jueves 13 de noviembre se prevén temperaturas máximas entre 20°C y 29°C en la sierra centro y valores entre 17°C y 29°C en la sierra sur. El evento tendrá vigencia desde las 10:00 horas del jueves 13 hasta las 23:59 horas del sábado 15, totalizando 61 horas de alerta activa. Se recomienda tomar precauciones ante el aumento de temperatura y exposición solar, así como considerar posibles afectaciones por vientos fuertes en zonas altas durante la tarde.

La Dirección de Estadística e Información Agraria de la DRALima informa que entre el martes 11 y el jueves 13 de noviembre de 2025, se presentará un incremento de la velocidad del viento en la costa limeña, de ligera a moderada intensidad. Este fenómeno podría generar levantamiento de polvo y arena, así como reducción de la visibilidad horizontal. Asimismo, se prevé la presencia de cobertura nubosa acompañada de neblina, especialmente en zonas cercanas al litoral, principalmente durante horas de la madrugada y primeras horas de la mañana.

El martes 11 de noviembre se prevén vientos con velocidades alrededor de los 34 km/h en la costa centro del departamento de Lima, con variaciones menores según la proximidad al litoral y la topografía local. El evento tendrá vigencia desde las 12:00 horas del martes 11 hasta las 23:59 horas del jueves 13, totalizando 59 horas de alerta activa. Se recomienda precaución en actividades al aire libre, transporte terrestre y operaciones en zonas costeras, particularmente en horarios matutinos donde la neblina y la baja visibilidad podrían ser más pronunciadas.

La Dirección de Estadística e Información Agraria de la DRA Lima informa que, entre el sábado 15 al lunes 17 de noviembre de 2025, se prevé precipitaciones (nieve, granizo, aguanieve y lluvia), de moderada a fuerte intensidad, en la sierra norte y centro, con impacto directo en las provincias limenas de Cajatambo y Oyón. En menor medida Canta, Huaral, Huarochiri y Huaura. Se espera la ocurrencia de granizo en zonas por encima de los 2,800 msnm y nevadas en localidades sobre los 4,000 msnm de la sierra central.

El sábado 15 de noviembre se esperan acumulados entre 10 mm/día y 25 mm/día en la sierra norte y valores entre 10 mm/día y 16 mm/día en la sierra centro.

El domingo 16 de noviembre se prevén acumulados entre 14 mm/día y 26 mm/día en la sierra norte y valores entre 10 mm/día y 18 mm/día en la sierra centro.

El lunes 17 de noviembre se prevén acumulados entre 14 mm/día y 25 mm/día en la sierra norte y valores entre 10 mm/día y 20 mm/día en la sierra centro.

Estas precipitaciones estarán acompañadas de descargas eléctricas y ráfagas de viento con velocidades cercanas a los 40 km/h. Asimismo, se espera lluvia dispersa y ligera hacia la costa norte.

El periodo de vigencia del aviso es de 59 horas.

La Dirección de Estadística e Información Agraria de la DRALima informa que desde el martes 18 hasta el jueves 20 de noviembre de 2025 se registrará un incremento de la temperatura diurna de moderada a fuerte intensidad en la sierra centro y sur. Se prevé escasa nubosidad hacia el mediodía, lo que favorecerá un aumento de la radiación ultravioleta (UV). Además, se esperan ráfagas de viento con velocidades cercanas a los 50 km/h, principalmente durante las horas de la tarde. El evento tendrá vigencia desde las 10:00 horas del martes 18 hasta las 23:59 horas del jueves 20, totalizando 61 horas de alerta activa. Las provincias de posible afectación son: Barranca, Cajatambo, Canta, Cañete, Huaral, Huarochirí, Huaura, Oyon y Yauyos. Se recomienda tomar precauciones ante el aumento de temperatura y exposición solar, así como considerar posibles afectaciones por vientos fuertes en zonas altas durante la tarde.

La Dirección de Estadística e Información Agraria de la DRALima informa que desde el martes 18 hasta el sábado 22 de noviembre de 2025, se presentarán condiciones atmosféricas que favorecerían la ocurrencia y propagación de incendios forestales, con niveles de moderada a extrema intensidad, en la región Lima.

Se prevé ausencia de precipitaciones, incremento de la temperatura diurna, disminución de la humedad y alto nivel de radiación ultravioleta (UV).

El aviso tendrá vigencia desde las 12:00 horas del martes 18 hasta las 23:59 horas del sábado 22, con una duración de 107 horas.

| NIVEL    | PELIGRO                                                                                           | RECOMENDACIÓN                                                                                                                                                              |
|----------|---------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ROJO     | Se predicen fenómenos meteorológicos de gran magnitud.                                            | Sea extremadamente precavido. Escó al consejo en todo momento del desarrollo de la situación y cumple los consejos e instrucciones dados por las autoridades.              |
| NARANJA  | Se predicen fenómenos meteorológicos peligrosos.                                                  | Manténgase al corriente del desarrollo de la situación y cumple los consejos e instrucciones dados por las autoridades.                                                    |
| AMARILLO | Pueden ocurrir fenómenos meteorológicos peligrosos que, sin embargo, son normales en esta región. | Manténgase al corriente del desarrollo de la situación meteorológica. Sea prudente si realiza actividades al aire libre que puedan acarrear riesgos en caso de mal tiempo. |

La Dirección de Estadística e Información Agraria informa que, entre el viernes 28 y domingo 30 de noviembre de 2025, se registrará un incremento de la temperatura diurna de moderada a fuerte intensidad en la sierra y en la costa norte y sur. Se prevé escasa nubosidad hacia el mediodía, lo que favorecerá un aumento de la radiación ultravioleta (UV). Asimismo, se esperan ráfagas de viento con velocidades cercanas a los 45 km/h, principalmente durante las horas de la tarde.

Las provincias de posible afectación son: Lima, Cajatambo, Canta, Cañete, Huaral, Huarochiri, Huaura, Oyón y Yauyos. Se recomienda adoptar medidas preventivas ante el incremento de temperatura, radiación UV y vientos fuertes, especialmente en zonas altas y expuestas.
